

# Our journey to net zero

This roadmap is the result of expert research and recommendations. It is designed to keep us focused on high impact emission reductions and on track until 2030. By then we will have reduced our greenhouse gas emissions by 50% in line with climate science to limit global warming to 1.5°C or well below 2°C, compared to pre-industrial levels.

We know all our colleagues and partners will play a key role in delivering these recommendations, and their hard work and insights will help us continuously develop and improve environmentally responsible operations to achieve net zero by 2040 or sooner if we can.
