

Transporting skills for the future

Engineering is of vital importance to the UK's economy, generating 23% of the UK's total turnover while employing 5.6 million people.

Our end-point assessment (EPA) and on-programme offer provide an end-to-end solution for the Engineering and Transport sector. Scott Wilkins, Industry Manager for Engineering, said

“The Engineering and Transport industry is making massive headway in the UK with record investments, which will generate thousands of new jobs. City & Guilds offers the foundations of skills that will underpin the successful delivery within this sector.”

The UK Government is supporting record investment in rail, roads, ports and airports. This investment will deliver new world-class infrastructure and create opportunities for people across the UK by generating thousands more jobs.

However, engineering skills are in short supply with 203,000 people with Level 3+ engineering skills needed every year to meet the demand.

This investment will need skilled people to build, maintain and operate this infrastructure once it's in use, and many of these roles will be highly technical.

Engineering and Transport – preparing apprentices for EPA success

As a market leader in EPA, we've delivered more than 35,000 EPAs since the launch of the new standards with a 90% pass rate. We have over 60,000 apprentices registered to take EPA with us across the range of sectors we serve.

We put customer success at the heart of apprenticeships. Our emphasis on centre support, quality of materials and preparation for apprentices, together with 140 years of working in education and with industry partners, makes us a trusted leader in EPA services.

Over
10,000
EPAs have been
delivered in the
last year.

Enabling success

We have unrivalled support and assessment preparation tools for you and your apprentices:

- EPA Preparation resources
- Exemplar material
- Lead Independent End-point Assessor (LIEPA) reports
- Learning Assistant and PIVOT
- Apprenticeship Training Manual
- Formative assessments for Automotive which replicate the EPA event
- Tutor support and assessment preparation resources via EPA Pro
- EPA Pro - our new EPA service delivery platform bringing the end-to-end EPA journey, from registration to results, all into one place.
